---

Dear Examiner Negin:

First, good morning!

Second, I'm out of the office today, but I was hoping you could take a quick look at a few amendment proposals I have for this case, then leave me a message on my voicemail (917-369-8880) whether my proposals will advance the case. Thanks in advance for your consideration!

These are my proposals to overcome the 101 rejection:

1) I'm proposing to amend the preamble to read:

"A method of administering a medicament into the body of a patient to be treated with said medication as a function of time with the aid of a computer-controlled dosage device";

2) I'm proposing to amend step c) at the end to add "to yield an adapted dosage time profile"; and

3) I'm also proposing to amend step d) to read:

"outputting of the adapted dosage time profile of c) to control the dosage device according to the adapted dosage time profile, and administering said medicament to said patient using said dosage device controlled by said

adapted dosage time profile."

Do you think these changes will get us around the 101 rejection?

If we made such an amendment, would you consider it responsive, i.e., not non-responsive?

Thanks for your consideration and any helpful suggestions you might provide.

Regards,

Kurt Briscoe
